Solution

(i) $(-11)-(-33)$

$=(-11)+(+33)$

$= 22$

(ii) $(-90)-(-50)$

$=-90-(-50)$

$=-90+50$

$=-40$

Example 1.13

Chitra has ₹ 150. She wanted to buy a bag which costs ₹ 225. How much money does she need to borrow from her friend?

Solution

Amount with Chitra = ₹ 150

Cost of bag = ₹ 225

Amount to be borrowed = 225 – 150

= ₹ 75

Example 1.14

What is the balance in Chezhiyan's account as a result of a purchase for ₹ 1079, if he had an opening balance of ₹ 5000 in his account?

Solution

Opening balance = ₹ 5000

Debit amount = ₹ 1079 (–)

Balance amount = ₹ 3921

Example 1.15

The temperature at Srinagar was –3°C on Friday. If the temperature decreases by 1°C next day, then what is the temperature on that day?

Solution

The temperature at Srinagar was –3°C on Friday. If the temperature decreases by 1°C then, temperature on the next day = –3°C – 1°C = –4°C

Example 1.16

A submarine is at 300 feet below the sea level. If it ascends to 175 feet, what is its new position?

Solution

Initial position of submarine = 300 feet below

= -300 feet

Distance ascended by submarine = 175 feet

= + 175 feet

New position of submarine = (–300) + (+175)

= –125

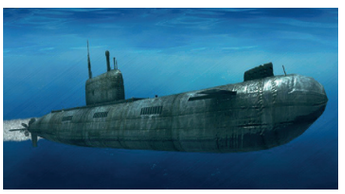

Fig. 1.17

That is, the submarine is 125 feet below the sea level.
