Try these

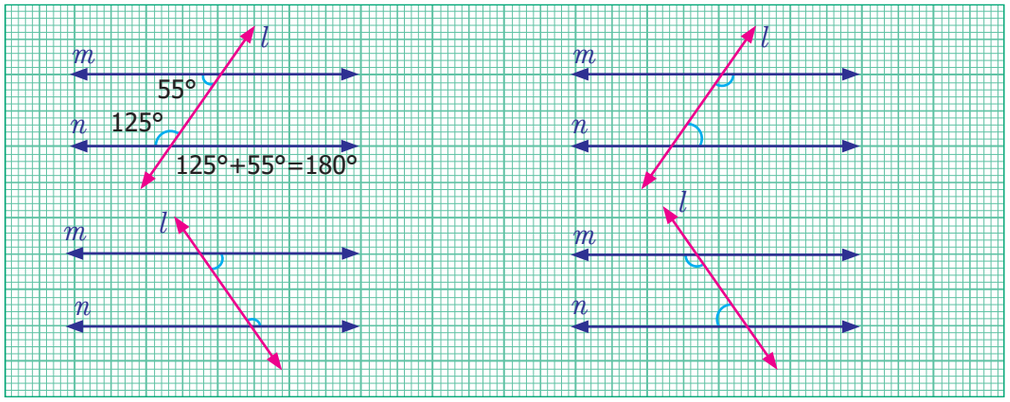

Find the value of $x°$.

Activity

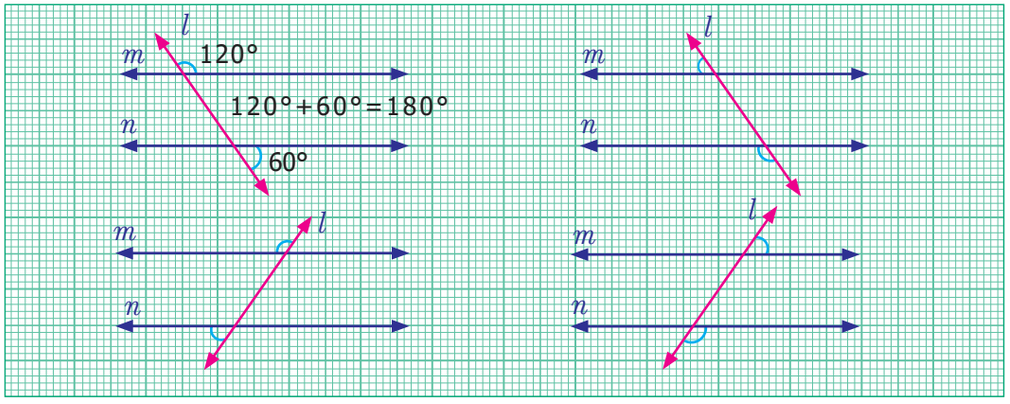

Observe the marked co-interior angles in each figure. Both lying between the interior of the parallel lines and on the same side of the transversal. One pair of angles are measured and found the sum to be 180°. Measure the remaining three pairs of angles and check.

From the above activity we can conclude that when two parallel lines are cut by a transversal, each pair of interior angles that lie on the same side of the transversal are supplementary.

Activity

Observe the marked co-exterior angles in each figure. Both lying at the exterior of the parallel lines and on the same side of the transversal. One pair of angles are measured and found that they are supplementary. Measure the remaining three pairs of angles and check.

From the above activity we can conclude that when two parallel lines are cut by a transversal, each pair of exterior angles that lie on the same side of the transversal are supplementary.
