6. For each pair of triangles state the criterion that can be used to determine the congruency?

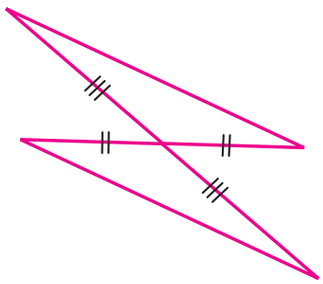

(i) 

(ii) 

(iii) 

(iv) 

(v) 

(vi) 

7. I. Construct a triangle XYZ with the given conditions.

(i) $XY = 6.4\ cm$, $ZY = 7.7\ cm$ and $XZ = 5\ cm$

(ii) An equilateral triangle of side $7.5\ cm$

(iii) An isosceles triangle with equal sides $4.6\ cm$ and third side $6.5\ cm$

II. Construct a triangle ABC with given conditions.

(i) $AB = 7\ cm$, $AC = 6.5\ cm$ and $\angle A = 120°$.

(ii) $BC = 8\ cm$, $AC = 6\ cm$ and $\angle C = 40°$.

(iii) An isosceles obtuse triangle with equal sides $5\ cm$

III. Construct a triangle PQR with given conditions.

(i) $\angle P = 60°$, $\angle R = 35°$ and $PR = 7.8\ cm$

(ii) $\angle P = 115°$, $\angle Q = 40°$ and $PQ = 6\ cm$

(iii) $\angle Q = 90°$, $\angle R = 42°$ and $QR = 5.5\ cm$

B7I8G2

Objective type questions

8. If two plane figures are congruent then they have

(i) same size (ii) same shape

(iii) same angle (iv) same shape and same size

9. Which of the following methods are used to check the congruence of plane figures?

(i) translation method (ii) superposition method

(iii) substitution method (iv) transposition method

10. Which of the following rule is not sufficient to verify the congruency of two triangles.

(i) *SSS* rule (ii) *SAS* rule (iii) *SSA* rule (iv) *ASA* rule
