In all these examples, the total number of items add upto 100. Can we calculate those percentage of items if the total number do not add upto 100? Yes. We can find the percentage of items. In such cases we need to convert the given fractions to their equivalent fraction with denominator 100.

For example consider a 5 × 10 square grid.

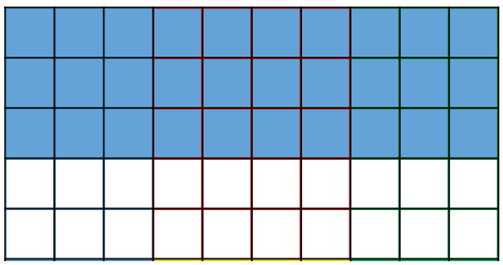

Fig 2.1

In the Fig 2.1, the blue shaded portion of the grid represents the fraction $\frac{30}{50}$. Which is equal to $\frac{60}{100}$ or 0.60 or 0.6 or 60%.

Try these

There are 50 students in class VII of a school. The number of students involved in these activities are:

Scout – 7 Red Ribbon Club – 6 Junior Red Cross – 9 Green Force – 3

Sports – 14 Cultural activity – 11

Find the percentage of students who involved in various activities.

2.1.1 Converting Fraction to Percentage

All numbers which are represented using numerator and denominator are fractions. They can have any number as a denominator. If the denominator of the fraction is hundred then it can be very easily expressed as a percentage. Let us try to convert different fraction to percentage.

Example 2.1 Write $\frac{1}{5}$ as per cent.

Solution

We have $\frac{1}{5} = \frac{1}{5} \times \frac{100}{100} = \frac{1}{5} \times 100\% = \frac{100}{5}\% = 20\%$.

P3Q8R8

Example 2.2 Convert $\frac{7}{4}$ to per cent.

Solution

We have $\frac{7}{4} = \frac{7}{4} \times \frac{100}{100} = \frac{7}{4} \times 100\% = \frac{700}{4}\% = 175\%$.

Example 2.3 Out of 20 beads, 5 beads are red. What is the percentage of red.

Solution

We have $\frac{5}{20} = \frac{5}{20} \times \frac{100}{100} = \frac{5}{20} \times 100\% = \frac{500}{20}\% = 25\%$.
