7. The weights of two chemical substances are 20.34 *g* and 18.78 *g*. Write the difference in percentage.
8. Find the percentage of shaded region in the following figure.

Objective type Questions

9. Decimal value of 142.5% is

(i) 1.425 (ii) 0.1425 (iii) 142.5 (iv) 14.25

10. The percentage of 0.005 is

(i) 0.005% (ii) 5% (iii) 0.5% (iv) 0.05%

11. The percentage of 4.7 is

(i) 0.47% (ii) 4.7% (iii) 47% (iv) 470%

2.2 Percentage in Real Life

We have seen how percentage are used in comparison of quantities. We also learnt to convert fractions and decimals to percentage and vice-versa.

Now we shall see some situations that use percentage in real life such as 5% of income is allotted for saving; 20% of children's picture book is coloured green; a book distributor gets 10% of profit on every book sold by him. What can we conclude from these situations.

Percentage as a value

Example 2.14 There are 50 students in a class. If 14% are absent on a particular day, find the number of students present in the class.

Solution

Number of students absent on a particular day $= 14\ \%\ of\ 50$

$$= \frac{14}{100} \times 50 = 7$$

Therefore, the number of students present $= 50 - 7 = 43$ students.

Example 2.15 Kuralmathi bought a raincoat and saved ₹25 with discount of 20%. What was the original price of the raincoat?

Solution

Let the price of the raincoat (in ₹) be P. So 20% of $P = 25$

$$\frac{20}{100} \times P = 25$$

$$P = \frac{25 \times 100}{20} = 125$$

Therefore, the original price of the raincoat is ₹125.
