$418 = 375 + x$

$x = 418 - 375$

$x = 43$

Hence, the value of x is 43.

Think

Check the properties of arithmetic mean for the example given below:

X	3	6	9	12	15

(i) If the mean is increased by 2, then what happens to the individual observations.

(ii) If first two items are increased by 3 and last two items are reduced by 3, then what will be the new mean?

DO YOU KNOW?

Here are few interesting averages.

1. On an average, you blink your eyes 17 times per minute. That is 5.2 million times a year.
2. The average person has about 1460 dreams a year. That is about 4 per night.
3. Based on the average life of a G2 star the present age of the sun is estimated to be 4.5 billion years, halfway through its lifetime.

Exercise 5.1

1. Fill in the blanks.
   (i) The mean of first ten natural numbers is _____.
   (ii) If the average selling price of 15 books is ₹ 235, then the total selling price is _____.
   (iii) The average of the marks 2, 9, 5, 4, 4, 8, 10 is _____.
   (iv) The average of integers between –10 to 10 is _____.
2. Ages of 15 students in 8th standard is 13, 12, 13, 14, 12, 13, 13, 14, 12, 13, 13, 14, 13, 12, 14. Find the mean age of the students.
3. The marks of 14 students in a science test out of 50 are given below. 34, 23, 10, 45, 44, 47, 35, 37, 41, 30, 28, 32, 45, 39 Find
   (i) the mean mark.
   (ii) the maximum mark obtained.
   (iii) the minimum mark obtained.
