Exercise 5.2

1. Find the mode of the following data.
   2, 4, 5, 2, 6, 7, 2, 7, 5, 4, 8, 6, 10, 3, 2, 4, 2

2. The number of points scored by a Kabaddi team in 20 matches are 36, 35, 27, 28, 29, 31, 32, 31, 35, 38, 38, 31, 28, 31, 34, 33, 34, 31, 30, 29. Find the mode of the goals scored by the team.

3. The ages (in years) of 11 cricket players are given below. 25, 36, 39,38 40, 36, 25, 25, 38, 26, 36. Find the mode of their ages.

4. Find the mode of the following data.
   12, 14, 12, 16, 15, 13, 14, 18, 19, 12, 14, 15, 16, 15, 16, 16, 15, 17, 13, 16, 16, 15, 15, 13, 15, 17, 15, 14, 15, 13, 15, 14

Objective type questions

5. The colours used by the six students for drawing is blue, orange, yellow, white, green and blue then the mode is _____.

   (i) blue (ii) green (iii) white (iv) yellow

6. Find the mode of data 3, 6, 9, 12, 15

   (i) 1 (ii) 2 (iii) 3 (iv) No mode

7. Find the modes of the data 2, 1, 1, 3, 4, 5, 2

   (i)1 and 5 (ii) 2 and 3 (iii) 2 and 1 (iv) 1 and 4

5.7 Median

We have discussed the situations where arithmetic mean and mode are the representative values of the given data. Let us think of any other alternative representative value or measures of central tendency. For this let us consider the following situation.

Rajam an old student of the school wanted to provide financial support to a group of 15 students, who are selected for track events. She wanted to support them on the basis of their family income. The monthly income of those 15 families are given below.

₹3300, ₹5000, ₹4000, ₹4200, ₹3500, ₹4500, ₹3200, ₹3200, ₹4100, ₹4000, ₹4300, ₹3000, ₹3200, ₹4500, ₹4100.

Rajam would like to give them an amount to their family.

If we find the mean, we get

Arithmetic mean, A.M $= \frac{\text{sum of all values}}{15}$
