PLANT CELL

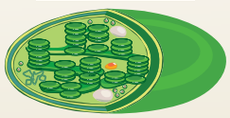

Cell Wall

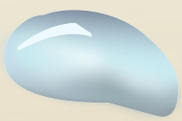

The outer most covering of the plant cell. It maintain the shape and protect the cell.

Chloroplast

Chloroplast is a organelle, characterized by its two membranes and a high concentration of chlorophyll and carry out the photosynthesis.

Large vacuole

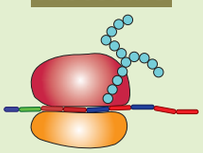

filled with both inorganic and organic molecules, along with water to support the organelle

Nucleus

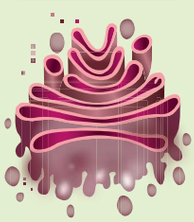

The nucleus is the control centre of the cell. It is the largest Organelle.

Ribosome

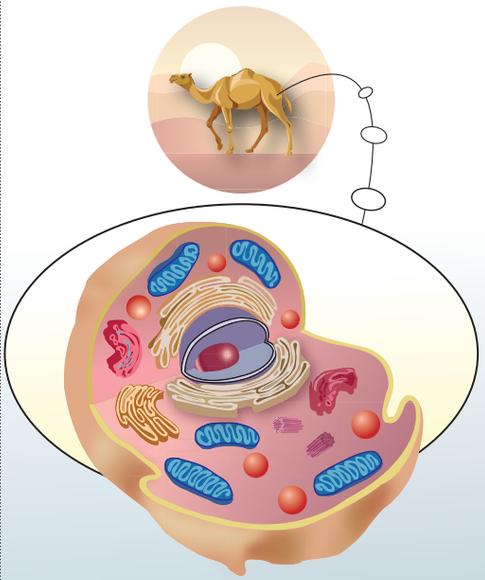

Ribosome is a minute particle consisting of RNA. They synthesize polypeptides and proteins.

Golgi body

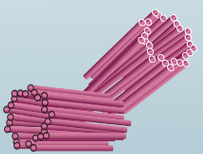

Golgi body is a complex of vesicles and folded membranes, involved in secretion and intracellular transport.

ANIMAL CELL

Centriole

Centriole is a pair of minute cylindrical, involved in the development of spindle fibres in cell division.

Small vacuole

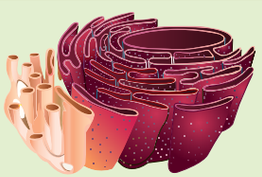

filled with both inorganic and organic molecules, along with water to support the organelle

Cytoplasm

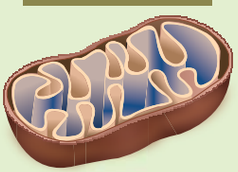

The cytoplasm includes all living parts of cell with in the cell membrane but excluding the nucleus.

Endoplasmic reticulum

Endoplasmic reticulum a network of membranous tubules and is involved in protein and lipid synthesis.

Mitochondria

Mitochondria are organelles, They make most of the cell's supply of adenosine triphosphate (ATP), a molecule that cells use as a source of energy. Their main job is to convert energy.
