Plane Mirror and Reflection

A polished (or) smooth surface (like glass) which forms image by reflection is known as mirror. A plane mirror is a mirror with a flat reflective surface. A plane mirror makes an Image of objects in front of it.

- The image is upright.
- The image and the object are the same size.
- The image is virtual.

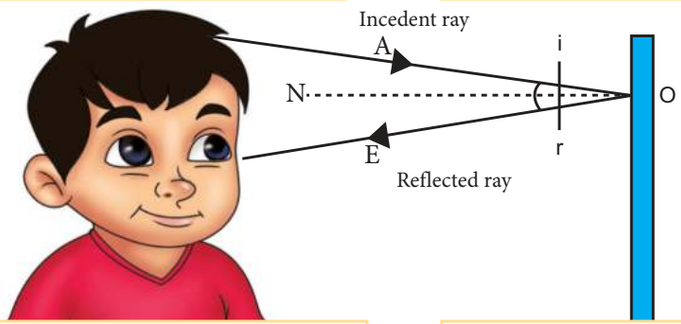

- The image is laterally inverted. The boy's left hand is his image's right hand.

- We can determine the position of an object's image by drawing light rays.

- The distance of the object from the mirror is equal to the distance of the image from the mirror (a=b).

The ray of light AO from the boy head strikes the mirror at point O. AO is called the incident ray.

The incident ray makes an angle of incidence. i. with the perpendicular line ON.

The light ray OA strikes the surface and is reflected as OE. OE is called the reflected ray. This ray makes an angle of reflection r with normal.

The line, ON, perpendicular to the surface is known as the normal.
