DO YOU KNOW?

Optical fibre is a device that works on the principle of ***total internal reflection*** by which light signals (huge data) can be transmitted from one place to another place with a negligible loss of energy in a very short time. It consists of a cable having one or more thin flexible fibers with a glass core through which light signals can be sent. Optical fiber can be twisted and bent easily. When a light a ray of light is incident at one end of the core of optical fiber, it suffers total internal reflection at the many places inside the fiber and emerges at the other end with negligible loss of energy. The data or information in the form of pulses of light, can be sent through bundles of optical fibers. Optical fibers have become very important in high-speed communications, such as cable TV and high-speed broadband services. Fiber optic cables are able to carry more signals than traditional **copper** cable telephone lines.

Real and virtual images

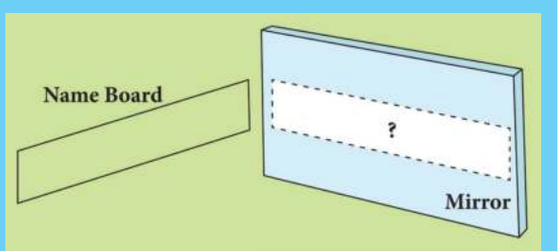

We have seen images being formed in a pinhole camera and a mirror. Can we see what is different in both of these images? Firstly, the image of the pinhole camera was formed on a screen. While the image made by the mirror is not obtained on a screen. The images that are obtained on a screen are called 'real image' and that which cannot be obtained on a screen 'virtual image'. Also notice that the image on pinhole camera was upside down. While the mirror image was upright.

Properties of Image formed in a plane mirror
♦ Image formed in a plane mirror is upright
♦ Image formed in a plane mirror is virtual
♦ The image is of the same size as the object
♦ The distance of the image from the plane mirror is equal to the distance of the object from the mirror
♦ Image is laterally inverted.

ACTIVITY 8

There are eight letters in the word. **EINSTEIN**

1. Write the word in front of a plane mirror shown in diagram.
2. Write down how these letters appear in the mirror.
3. How many of these letters appear to be different, when the word is reflected?
4. Write down the letters that appear to be the same.
