II. Fill in the blanks

1. A plane mirror produces a _____ image.
2. A _____ reflection helps us to see the objects.
3. The light ray gets _____ when it falls on any polished surface.
4. Sunlight is a blend of _____ colours.
5. The splitting of white light in to seven colours is called _____.
6. The moon _____ sun light
7. The sunlight can be split into its constituent colours using _____.
8. Reflection of light from rough surface is called _____ reflection.

III. True or False – If False give the correct answer

1. Rainbow is formed by dispersion of which light by water drops.
2. The image formed by the plane mirror is laterally inverted, hence the image seen through the periscope is also laterally inverted.
3. We see planets because they reflect light from the sun.
4. We see a book because it reflects the light that falls on its surface.
5. The image formed in a pinhole camera is always inverted.
6. The image formed in a pinhole camera is always the same size as the object.
7. The image formed in a plane mirror is upside down.
8. A plane mirror is opaque.
9. A shadow is formed on the same side of the object as the source of light.
10. we are able to see things around us with the help of regular reflection.
11. After passing through a prism, white light splits into a band of seven colours.

IV. Match the following

1. Rectilinear propagation	-	Primary source of light
2. Plane Mirror	-	Non-luminous object
3. Fire fly	-	Periscope
4. The Moon	-	Pinhole camera
5. Wide light source	-	Spectrum of light
6. Regular reflection	-	luminous object
7. The sun	-	Penumbra
8. Band of seven colours	-	Glossy surface

V. Answer the following questions in short

1. With the help of a diagram, state the laws of reflection.
2. Figure shows a pencil placed above a mirror.
