a. Draw its image formed by the mirror.

b. Show how light rays from the object are reflected at the mirror to form the image for the eye.

3. A person is looking at the image of a tree in a mirror placed 3.5 m in front of him. Given that the tree is at 0.5 m behind his eyes. Find the distance between the image of the tree and his eyes. What are needed to see an object?

4. What are luminous objects?

5. Is the moon a luminous object?

6. What are the three types of materials based on the absorption of light?

7. What are the parts of shadow?

8. What are the properties of shadow?

9. What is plane mirror?

10. What is prism?

11. What do you mean by visible light?

12. Write the items given here in the correct column **(Stars, brick walls, plants, mirror, planets, electric light bulb,candle)**

Sources of Light	Objects that reflect light

13. A boy of height 1m 45 cm is standing in front of a long mirror at a distance of 2 m. From this information, fill up the following sentences:

a. The distance between the boy and his image is _____.

b. The height of the image is _____.

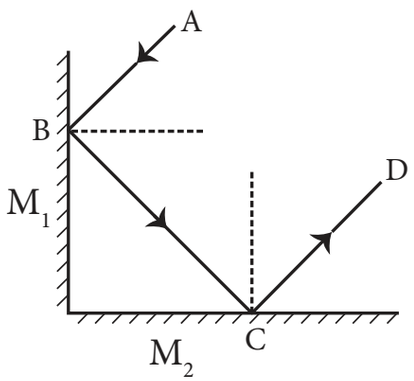
c. When the boy moves 1m forward, the distance between him and his image is _____.

14. Draw a diagram of a pin hole camera showing the rays of light passing between the object and its image.

15. Why is the writing on the front of an ambulance back to front as shown in the picture?

16. Explain with examples, why some capital letters look the same in a mirror but others are reversed.

17. Two plane mirrors M1 and M2 are placed perpendicular with each other, as shown in figure. The ray AB makes an angle 39 ° with the plane mirror M1, then



1. The reflected rays are _____, _____.

2. The incident rays are _____, _____.

3. What is the angle of incident corresponding to the ray BC?
