

The silk worms spend about five days producing silk and spinning its cocoon of a single long thread. The cocoons are boiled to make it easier to unwind the silk and kill the pupae inside. If the silk moths were allowed to hatch, the long silk fibres will get turned by the hatching of moth. Cocoons are unwind and then the individual silk filament is reeled together to form a thread large enough for weaving. The silk thread is cleaned, dyed, woven into fabric.

Characteristic features of Silk

- ❖ It is very soft, comfortable and versatile
- ❖ It can be easily dyed.
- ❖ It is the strongest natural fibre.
- ❖ It has a poor resistance to sunlight exposure.
