

Land forms formed by River

The running water in the river erodes the mountainous track, which creates a steep-sided valley like the letter 'V' known as ***'V' shaped valley***.

'V' shaped valley

Falling of river water over a vertical step in the river bed is called ***waterfall***. It is formed when the soft rocks are removed by erosion. E.g. Coutrallam falls across the river Chittar in Tamil Nadu.

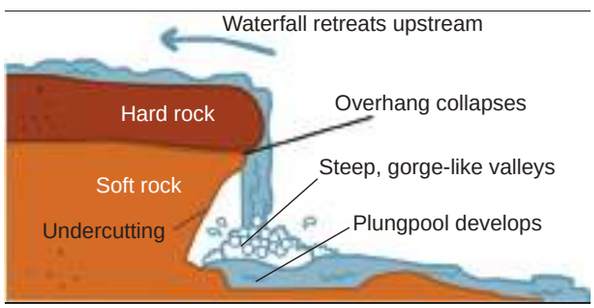

Plunge pool is a hollow feature at the base of a waterfall which is formed by cavitation. ***Alluvial fan*** is a deposition of sediment occurs at which the river enters a plain or the ***foot-hills***.

Tributary: A stream or river that flows into and joins a main river.

Distributary: A stream that branches off and flows away from a main stream.

DO YOU KNOW?

The world's highest waterfall is ***Angel Falls*** of Venezuela in South America. The other waterfalls are ***Niagara Falls*** located on the border between Canada and USA in North America and ***Victoria Falls*** on the borders of Zambia and Zimbabwe in Africa.

As the river enters the plain it twists and turns forming large bends known as ***Meanders***. Eg. Meanders along the River Vellar near Sethiyathope in Cuddalore District, Tamil Nadu. Due to continuous erosion and

Meanders
