1. The Rocky Mountains

The western part of the continent is occupied by long ranges of young folded mountains interspersed with high plateaus, narrow valleys and broad interior basins. This mountain range extends for about 4800 km from Alaska in the North to the Panama Strait in the South. The width varies from 110 to 480 Kms. They are consists of parallel ranges and are known as the Rockies in the east and the Coast Range Mountains in the west. The Sierra Nevada is a mountain range in the Western United States lies between the Central Valley of California and the Great Basin. In Mexico, they are called Sierra Madre. The Rockies and the Coast Range are together is known as "Western Cordilleras". There are high intermontane plateaus lies between these ranges. Such as the Mexican plateau, the Colorado Plateau and the Columbian plateau.

The Cordilleras are also part of the Fire Ring of the Pacific because there are a number of active volcanoes and this area is also subject to earthquakes.
